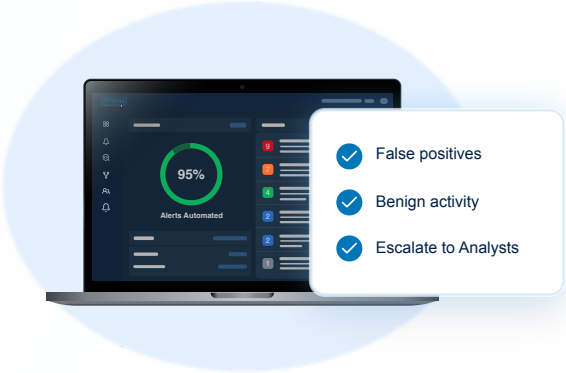
CYBERSECURITY

SMARTER ANALYSIS.
STRONGER DEFENCES.

Vendor agnostic AI SOC analyst platform.

Athena Cybersecurity helps security teams cut through the noise, automatically dismissing non-actionable alerts so analysts can focus on what matters.



Challenges for security teams

Security teams are overwhelmed by alert volume, fragmented tools and a growing talent gap.

Effect on organisations

These challenges create real operational and business risks.

Limited talent pool, organisations struggle to hire, train and retain top security talent.

Security analysts are burnt out. Analyst turnover rate increases resulting in less effective teams.

Malicious alerts are missed because security teams are over run.

Running a 24x7 SOC is expensive and organisations are often pushed to outsource.

How Athena Cybersecurity helps

Athena connects to your existing tooling and workflows, learns from your playbooks and processes and analyses alerts at machine speed.

1. Triage all alerts 24x7 at inference speed.
2. Dismiss all benign and non-malicious activity.
3. Dismiss all false positives.

A smarter, more focused SOC.

Organisational risk is reduced with our fully automated, scalable 24x7 solution that allows your team to focus on and resolve the alerts that matter, at a fraction of the cost.
